

$$m = 50 \text{ kg}$$

$$\begin{aligned}\sin 37^\circ &= 0,6 \\ \cos 37^\circ &= 0,8\end{aligned}$$

$$a) W_F = F \cdot d \cdot \cos 37^\circ = 600 \text{ N} \cdot 2 \text{ m} \cdot 0,8$$

$$W_F = 960 \text{ J}$$

$$b) W_{FR} = F_R \cdot d \cdot \cos 180^\circ = 100 \text{ N} \cdot 2 \text{ m} \cdot (-1)$$

$$W_{FR} = -200 \text{ J}$$

$$c) W_P = P \cdot d \cdot \cos 127^\circ = 500 \text{ N} \cdot 2 \text{ m} \cdot (-0,6)$$

$$W_P = -600 \text{ J}$$

$$d) W_N = 0$$

$$e) W_R = W_F + W_P + W_{FR} = 960 \text{ J} - 600 \text{ J} - 200 \text{ J}$$

$$W_R = 160 \text{ J}$$

$$f) W_R = F_R \cdot d \Rightarrow F_R = \frac{160 \text{ J}}{2 \text{ m}}$$

$$F_R = 80 \text{ N}$$

5) g)

$$W_R = \Delta E_c$$

$$160J = E_{cf} - E_{co}$$

$$160J = \frac{50kg \cdot V_f^2}{2} - \frac{50kg \cdot (0,6 \frac{m}{s})^2}{2}$$

$$160J = \frac{50kg V_f^2}{2} - 9J$$

$$\sqrt{\frac{(160J + 9J) \cdot 2}{50kg}} = V_f$$

$$V_f = 2,6 \frac{m}{s}$$

$$h) \begin{array}{|l} E_{co} = 9J \\ \hline E_{cf} = 169J \end{array}$$

$$E_{cf} = \frac{50kg \cdot (2,6 \frac{m}{s})^2}{2} = 169J$$
