Reemplazando en 1:

$$A_{\circ} = \frac{79 \ g \ (78, 2 \ -46, 6)^{\circ} C}{(46, 6 - 17, 6)^{\circ} C}$$

$$A_{\circ} = \frac{79 \ g \ 31,6^{\circ}\text{C}}{29^{\circ}\text{C}}$$

$$A_{\circ} = 86,08 \ g$$

Reemplazando en 2:

$$\Delta A = 86,08 g \left[\frac{0.5 g}{79 g} + \frac{0.3 \text{ °C} + 0.3 \text{ °C}}{(78,2 \text{ °C} - 46,6 \text{ °C})_{\circ}} + \frac{0.3 \text{ °C} + 0.3 \text{ °C}}{(46,6 \text{ °C} - 17,6 \text{ °C})_{\circ}} \right]$$

$$\Delta A = 86,08 g \left[\frac{0.5 g}{79 g} + \frac{0.6 \text{ °C}}{(31,6 \text{ °C})_{\circ}} + \frac{0.6 \text{ °C}}{(29 \text{ °C})_{\circ}} \right]$$

$$\Delta A = 86,08 g [0,046]$$

$$\Delta A = 3,96 g$$

Reemplazando en 3:

$$\Delta \pi = \Delta A + \Delta M$$

$$\Delta \pi = 3,96 g + 0.5 g$$

$$\Delta \pi = 4,46 g$$

Redondeo:

$$\Delta \pi = 4,46 g = 4 g$$

$$\pi_{\circ} = 6,08 g = 6 g$$

$$\pi = \pi_{\circ} \pm \Delta \pi$$

$$\pi = 6g \pm 4g$$
